

# STEEL SCAFFOLDING ACCESS

- Steel scaffolding Access Ladders, are aluminium staircases used on steel scaffolding or formwork for multi level access, using a safe method
- Staircases are lighter than steel alternatives, and do not corrode
- Staircases provide larger stepping area and safer to use in comparison with straight ladders
- Handrails can be incorporated if needed into the staircase for additional safety, and are removable
- Landings can be provided with hooks to fix onto ledgers, instead of traditional wooden boards
- Staircase dimensions are based on Ledger details used at site
